

MONOLITH FACTS & RESULTS

NOVEMBER 2022

MONOLITH

Monolith was founded in 2006 and invests in undervalued European small caps with a large untapped potential. The small cap segment has a relatively high number of investment opportunities, as this segment is covered marginally by (large) financial institutions. In order to unlock the hidden value of Monolith's portfolio companies it co-operates with company management and shareholders. This often leads to a corporate event situation. Monolith's investment strategy can be characterized as private equity in public markets. By employing this strategy, the team at Monolith has achieved an average outperformance of close to 0.5% per annum in the past 15 years, when compared to the European small cap indices.
